INTRODUCTION

The Rahna Yasta is the Pahlavi title given to the Zoroastrian hymn (Phl. yašt') that stands in praise of Rahnu (Phl. rašn), the deity 'Justice'. It belongs to the body of religious texts known as the Avesta - a collection of works composed in the ancient Iranian language of Avestan. Although the Rahna Yasta, like all of the Avesta, is generally assumed to have been committed to writing either during, or shortly after the Sasanian era (224-651 CE.), its verses were probably composed during the early first millennium BCE, being transmitted in the first instance orally.

When discussing the Avesta, it is customary to distinguish the so-called ‘Older Avesta’ from the ‘Younger Avesta’. The former comprises the Gāthās (a series of 17 hymns), the Yasna Haptaŋhāti (the ‘worship in seven chapters’), as well as the ahūna vairīa and arītāman īšīa prayers. These are composed in what is widely assumed to be a more archaic form of the Avestan language, referred to as ‘Old(er) Avestan’. The remainder of the Avestan text corpus is composed in so-called ‘Young(er) Avestan’.

Among the Younger Avestan texts is an important assemblage of 21 hymns known as the Yaštās. Each Yašt is devoted to a different member or group of the Zoroastrian pantheon, beginning with the supreme god Ahura Mazda (Yt.1) and ending with the star Vanaṭ (Yt.21). Within this series, the Rahna Yasta is the twelfth.

The Yaštās vary significantly in content and length. Early classifications essentially divided the hymns into the ‘great’ Yaštās and the ‘minor’ Yaštās, which latter group includes Yt.12. According to Lommel, the ‘great’ Yaštās are the more ancient, often containing cosmological, naturalistic or heroic mythology. By contrast, the ‘minor’ Yaštās were broadly characterised as little more than ‘a collection of prayer-formulae and remnants of a mindless, trivial, jibber-jabber cult’.

It is clear that this categorisation was based upon a modern, Western literary aesthetic that, broadly speaking, lays significant emphasis on originality. For this reason, the Rahna Yasta, whose own style is somewhat repetitive, was widely dismissed by many early scholars, being variously branded as ‘a late and insignificant work’ and ‘a linguistically inferior,

1 The form yašt, meaning ‘prayer, worship’ (MacKenzie, CPD, 97) arguably comes from Av. yašt- lit. ‘worshipped’ (so Nyberg, Religionen, 38. Panaino, 1994). It is connected with the root √yaz ‘to sacrifice, worship’.

2 For a summary of research on the periodisation of Avestan, including Tremblay’s claims of evidence for ‘Middle Avestan’ (being an intermediate stage between Old(er) and Young(er) Avestan), see Hintze, 2014b:16-19.

5 Lommel, Y'sAv, 1 ‘...eine Zusammenstellung von Gebetsformeln und Niederschlag eines geistlos veräußerlichten Plapperkultus’.

6 Bartholomae, AirWb, 1517, s.v. rašnav- ‘Dem das späte und nichtssagende Stück Yt.12 gewidmet ist’. 
lousy job’. This approach to the Yashts however, is profoundly misguided and fails to take sufficient stock of the fact that these compositions were born of an oral tradition. Until they were accorded the status of ‘sacral’ poetry and achieved petrifaction, works such as the Yashts were presumably composed afresh in each performance – the poet drawing upon banks of well-known formulae for their improvisation. Repetition both within the Yashts and between the Yashts is a common feature of this literary genre. Subsequent attempts at grouping the Yashts have, for example, contrasted so-called ‘legendary’ works, being hymns that are constituted in the main by descriptive accounts of worshipful acts performed by individuals in respect to a given deity (characterised by the frequent use of the verb yazata ‘he/she worshipped’) with ‘hymnic’ works, including Yt.12, that are primarily concerned with lauding a particular deity’s qualities and praising his or her deeds (characterised by their first-person addresses, e.g. yazamaide ‘we worship’). A third, ‘apotropaic’ group has also been proposed, covering such Yashts as hymns to the titular deity’s protective powers. The boundaries between these suggested groups of Yashts however, are quite fluid and many contain elements from more than one category. Despite such differences, the Yashts are united in containing essentially the same opening and closing formula, allowing for substitutions depending on the deity being addressed. Further, as Hintze observed, they are almost without exception repositories of information not found elsewhere in the Avesta. In the case of the present Yašt, it has long been recognised to uniquely preserve information regarding an ordeal ritual (the varah-) that was designed to supernaturally detect perjury. It also contains a comprehensive cosmographical scheme that affords important insights into an ancient Iranian worldview.

1.1 RITUAL PURPOSE OF THE RAŠN YAŠT

According to the Dēnkard’s testimony, the Great Avesta of the Sasanian era was composed of 21 Nasks ‘divisions’, among them the Bagān Yašt Nask. The latter is said to have included descriptions of Ahura Mazda and the other gods, both visible and invisible.

---

7 Lommel, Y’sAv, 95 ‘...ein sprachlich minderwertiges Machwerk’.
8 The inadequacy of the traditional criteria for classifying the Yashts was addressed by Skjørve, 1994: 234-236, who also drew attention to such features of the hymns as reflecting their oral composition and transmission.
9 On the division of the Yashts into ‘legendary’, ‘hymnic’ and ‘apotropaic’ types, see Hintze, 2014a. The division of the ‘great’ Yashts into two categories, characterised by the pervasive use of the verbs yazata and yazamaide was proposed by Kellens, 1978, though subsequently modified somewhat, see Kellens, 1996a:101 fn.46 (cf. also Kellens, 1998:498 fn.73).
10 See commentary to Yt.12,0 no.1 (p.90f).
11 Hintze, 2009a:54.
There is good reason to believe this Nask contained many compositions that are counted among the Yašt today, including the Rašn Yašt. As highlighted by Kreyenbroek, the Nērangestān makes repeated reference to a high ritual - the Bagān Yasna, in which the contents of this Bagān Yašt Nask were intercalated with the Yasna and Visperad as part of a liturgy. The precise details of this ceremony have not been preserved, though it would no doubt have been lengthy and highly involved. The Nērangestān however, also suggests the one time existence of a much simpler, and less costly ritual that involved the recitation of the Yašt. This essentially consisted of the dedication of a dhrōn service to the day's presiding deity, accompanied by the intoning of the appropriate Yašt. In the Zoroastrian calendar, the 30 days of the month (and 12 months of the year), are each named after a particular yazata- ‘venerable one’: the first of the month, for example, derives its name from Ahura Mazdā, the 18th day from Rašnu. In contemporary praxis, the Yašt continues to occupy a place in the lives of many lay Zoroastrians, taking on the character of common prayers. To recite the Rašn Yašt on the day of Rašnu is considered auspicious, though it may also be intoned on the 7th (Amurdād), 26th (Aštād) and 28th (Zamyād) days of the month. There is no restriction on the time period (gāh) in which it may be uttered.

1.2 CONTENTS OF THE RAŠN YAŠT

Following the introductory formula, the Yašt to Rašnu commences with a brief question and answer exchange between Ahura Mazdā and the ‘truthful one’ (ašauvan), identified in verse 2 as Zaraϑuštra, about the nature of the ‘Bounteous Mantra’ (māϑra-spenta). This dialogic or catechismal style is, in respect to Zoroastrian literature, termed frašna (lit. ‘question’), and usually involves the parties of Zaraϑuštra and Ahura Mazdā.

---

13 The principal evidence consists of the Dēnkard’s description of the Bagān Yašt Nask’s contents (see Skjærvø, 1989. König, 2012). West, PT, IV, xlv drew attention to a New Persian Rivāyat in the 17th cent. ms. B29 (fol.164), according to which the Bagān Yašt Nask contained 16 Yaṣts (Yts.1, 5-19). In this connection, it is noteworthy that in the mss. F1 and E1, Yaṣts 14-19 are indicated as corresponding to fragards 11-16 (see Kotwal/Hintze, E1, 1-2). The Rivāyat tradition however, also attests to 17 divisions of the Bagān Yašt Nask, see West, PT, IV, 426, 431, 436, 444.

15 Cf. Cantera, 2013:103-5, who reconstructed a hypothetical, Bagān Yašt intercalation ceremony. Cantera, loc.cit. and 2009:21-24, building on the work of Kellens, 1996a, has also argued that the Visperad ceremony originally involved the intercalation of four Yaṣts, namely Yts.5,10,14,19 between the Old Avestan parts of the Yasna.

18 Alternative pairings of interlocutors include: Y.71,1 Frāśaϑstra and Zaraϑuštra; Yt.5,90 Zaraϑuštra and Ahraduī Sirī Ašaϑhrā. On the rather complicated set of conversations presented in the Vištāsp Yašt, see Cantera, 2013:125-127.
Much of the material from the other Yašt (not to mention the Vīdēvdād) is also cast in the frašna mould19. In part, the presumed purpose of this was to portray the composition as having been divinely revealed, thereby giving authoritative weight to its doctrinal assertions20. One might suppose this was especially desirable when elucidating, for example, the physical arrangement of the universe – a subject of which most humans could not claim personal knowledge. It would also have affirmed that the instructions for performing the varah- ‘ordeal’ ritual contained in Yt.12 were consistent with the Mazdā-worshipping religion and not party to the kinds of sorcery practised by so-called Daēua-worshippers21.

The remainder of the Raš Yašt (vv.3-37) unfolds in three distinct, yet related, movements:

The first movement, comprising stanzas 3-6, begins rather abruptly with the words āat mraōt ahurō mazdā ‘thus spoke Ahura Mazdā’, followed by a direct quotation in the first-person voice, outlining how the varah- ritual is to be performed. This includes the invocatory formula to be uttered, e.g. ‘We call, we propitiate Rašnu who is strong ... to this prepared ordeal’ as well as certain ritual actions to be performed, such as the direction to ‘strew forth one-third of the barašman- along the path of the sun’. The invitation to attend the ordeal is extended first to Ahura Mazdā (vv.3-4), then to Rašnu (vv.5-6), and both are said to come accompanied by a host of other deities, including the victorious Winds, Dāmōš Upamana, the Kauui-dynasty Glory and the Mazdā-made Radiance.

The second movement, comprising stanzas 7-8, is devoted in the main to praising Rašnu, and consists of a series of 13 vocative forms, lauding the deity as, for example, tāiuṃ nijāmišta- ‘the best at striking down the thief’.

Finally, the third movement, which extends from stanza 9 through 37, artfully continues the invocation of Rašnu whilst building up a detailed cosmographical map. This it achieves by commencing each verse with the phrase yatcitahi rašnuu āšāum... ‘Be you, O truthful Rašnu at ...’, followed by the name of a particular place and a repetition of stanzas 5-8. In total, Rašnu is called forth from 29 distinct locations, both terrestrial and superterrestrial. The hymn concludes with the standard closing formula found in the Yašts.

Whilst stanzas 3-37 appear to be of a piece, it is somewhat difficult to see the direct relevance of stanzas 1-2. Conceivably, the hymn to Rašnu was largely adapted from a pre-existing composition whose original purpose related directly to the ordeal ritual. In order to lend this a suitably Yašt-like feel, it was prefixed with a frašna fragment whose lines contain echoes of other Yašts (Yts.1, 8 and 1922). As Pirart23 plausibly speculated, the motivation for the inclusion of this particular text portion might also have been that it

21 This distinction is made in DkD.693 l.2-3. See p.84.
22 See commentary to Yt.12,1 nos. 4,5 (p.99).
23 Pirart, 2009:222.
contains the word *rašniia*²⁴ (v.1). This could be interpreted as a kind of ‘sound-hint’, subtly invoking Rašnu, without explicitly pronouncing the deity’s name.

1.3 **STRUCTURE OF THE RAŠN YAŠT**

Most Yašts, but not all, are structured internally by *karde* ‘sections’²⁵ whose length within a hymn, and number between the hymns differs significantly but which represent a self-contained unit. Typically, Yaš *karde* conclude with the same formula that includes the *yejhe hātqm* prayer. The opening lines of a Yaš *karde* meanwhile, differ across hymns, but are internally consistent.

Concerning the division into *karde*, the Rašn Yašt is unusual: F1, the oldest known manuscript containing the text, does not evidence such a division nor does J18 which appears to derive from a line of transmission somewhat independent of F1²⁶. Originally, the manuscript E1 did not divide the text in this way either, though a second hand has added the *karde* numbers 1-31. This is consistent with the manuscripts P3 P13 W2 J10 J19 M12 that break the hymn into 31 numbered *karde*. O3 does not segment the text into *karde*. However, together with L18 W2 and J19, O3 does indicate that the standard formula with which *karde* are concluded is to be recited before the Yašt’s conclusion²⁷.

In those manuscripts that do break the Rašn Yašt into numbered *karde*, the first section comprises stanzas 1-8 (inclusive). Each successive stanza corresponds to a new *karde*, such that the text following verse 37 has in some instances been numbered *karde* 31. With the exception of the final *karde* (31), these divisions are not followed by the standard formula that marks the end of each *karde* in most other Yašts. Instead, each of the stanzas 9-37 is followed by a repetition of stanzas 5-8. The only other Yašt whose *karde* are not concluded in the standard fashion is the Frawardīn Yašt (Yt.13) that is also sectioned into 31 *karde*. It is important to note that the further subdivision of *karde* into stanzas is not a feature of the manuscripts, but a scholarly convention dating to the mid 19th century²⁸ and adopted for ease of reference.

For readability’s sake, an additional editorial choice has been taken to divide the stanzas into verse lines. Although the Yašts evidently contain metrical material, the nature of the

---

²⁴ On *rašniia*, see commentary to Yt.12,1 no.2 (p.95).
²⁵ The *karde* division is also characteristic of the Visperad, and contrasts with the *hāsti* ‘chapter’ division of the Yasna.
²⁶ On the various lines down which Yt.12 has been transmitted in written form, see below section 1.7.2 (see p.12ff).
metre has been much debated\(^9\). It has long been recognised, however, that octosyllabic verse lines dominate and preference has here been given to divisions that reflect this. Yet, as in the other Yāstās, we are compelled to admit many lines of more or fewer syllables. The reason for this variability remains uncertain\(^10\).

As to the segmenting of the text found in the actual manuscripts, F1 and E1 make use of punctuation marks consisting of three dots arranged in a triangular pattern (\(\ldots\)), and a short horizontal line with a dot above and below resembling an obelus (\(\sim\)) respectively. The placement of these markings in the two manuscripts is largely in agreement. The table below contrasts the division of Yt.12.2 into verse lines in the present edition with the text as it is found in F1.

Division of Yt.12.2 in the present edition and in the ms. F1.

<table>
<thead>
<tr>
<th>Yt.12.2 Division (and text) in Present Edition</th>
<th>Yt.12.2 Division (and text) in F1</th>
</tr>
</thead>

</tr>
<tr>
<td>(i) tarādātem amitāis dāmnāḥ</td>
<td>tarādātem amitāis dāmnāḥ .. (\sim)</td>
</tr>
</tbody>
</table>

Pirart\(^9\) has suggested the use of the punctuation mark \(\sim\) in F1 is evidence of a memory of octosyllables. As may be observed above, the text in F1 is divided also into units of 3 (arš.dātam), 4 (tāt frazdātem), 5 (tāt dāmnāḥputam) and 9 (azam bā tē tāj framrauvānī) syllables. Indeed, in two instances a potential octosyllabic line, namely māđrō spītā yō aśāsamā and tāt frazdātem tāt vicīdām is broken up into two, quadrisyllabic units.

Though it is clear that the \(\sim\) sign is indicative of some kind of internal textual division, its precise nature is so far poorly understood.

---

\(^9\) For a broad survey of the literature associated with the question, see Hintze, 2014a; Hintze, 2014b:14-16.

\(^10\) Indeed, even the correct method of counting syllables in Younger Avestan is not absolutely certain. Pirart, 2009, included possible syllabic values of verse lines in his edition of the Rāṣī Yāst and, in places, the scholar inserted or deleted text to achieve an octosyllabic line.

\(^11\) In Yt.12.2, the placement of the sign \(\sim\) in E1 agrees with the placement of \(\ldots\) in F1 with the exception that, in E1, azam is followed by \(\sim\).

\(^12\) Pirart, 2009:229.
1.4 LANGUAGE OF THE RAŚN YAŚT

Contrary to Lommel’s\(^{35}\) characterization of the Raśn Yaśt as being, at least in part, a linguistically inferior composition, the hymn’s language appears comparable with that evidenced in the other Yaśts. The material of which these texts are constituted was presumably composed at varying times and possibly varying places\(^{34}\). The Raśn Yaśt reveals evidence of the gradual collapsing in Avestan of the nominal paradigms, e.g. the use of the datative case for the genitive (cf. *hazayrət, Yt.12,24\(^{10}\)). Examples of this kind however, are plentiful and widespread in the Younger Avesta, and ought not to be regarded as properly ‘ungrammatical’.

That said, we do find in Yt.12 a number of genuinely irregular constructions involving the preposition *upa* governing substantives in the nominative case (Yt.12,28-32)\(^{36}\). This no doubt reflects the uncritical combination of set formulae and again, is not without broad parallels in other parts of the Avesta.

The Raśn Yaśt though, also includes fifteen forms that are not otherwise attested and it is thus an important witness to the Younger Avestan language. These forms are:

Words attested only in the Raśn Yaśt.

\(^{34}\) It has been suggested by Hoffmann/Narten, *Archetypus, "ff* and Hoffmann/Forsman, ALF, 35, that certain phonetic phenomena displayed in the ms. reflect dialectal variations of Avestan associated with the ancient region of Arachosia. These include: the change of *-rə-* > *-ə-* e.g. *ašəna-*> *ašən*; for expected *xə-dəxt-hya-*> *xə-dəxt-yə-*, (Yt.12,1), *məd-*> *məđ* (Yt.12,3); the development of unaccented *hav-* in Antarian to *x*-, e.g. *xədrə-*> *hav-ədərə-*, (Yt.12,36).

\(^{35}\) See Reichelt, *Avjel, 243*

\(^{36}\) See Yt.12.9 commentary on *upa*.
Neither a Pahlavi nor Sanskrit translation of the Rašn Yašt is known to exist and, as von Spiegel\(^{37}\) lamented in relation to this ‘short but important work’, we are thus limited to our own powers of understanding.

The first European translation of the Rašn Yašt, as indeed the Avesta, was published in 1771 by Anquetil-Duperron\(^{38}\). His three-volume edition was entitled ‘Zend-Avesta. Ouvrage de Zoroastre’. A German translation of Anquetil-Duperron’s work was subsequently published between 1776-1777, by the theologian and philologist Kleuker\(^{39}\).

The next major advance in Avestan scholarship came with von Spiegel’s\(^{40}\) monumental German translation of the Avesta, published between 1852-63. At the request of the Parsi Mr. Muncherjee Hormusjee Cama, von Spiegel’s translation was rendered into English by Bleeck\(^{41}\) in 1864, for the express benefit of the Zoroastrian community living in India.

In turn, this work was succeeded by another complete translation of the Avesta into French, prepared by de Harlez\(^{42}\), the second edition of which was published in 1881. Shortly thereafter (1883), a second English translation of the Rašn Yašt appeared as part of Darmesteter’s\(^{43}\) contribution to the Sacred Books of the East series, edited by Müller. Between 1892-3, Darmesteter\(^{44}\) also produced a French translation of the Avesta under the title Le Zend Avesta. Unlike von Spiegel, de Harlez and Darmesteter would have had the benefit of Justi’s Handbuch der Zendische Sprache, which was published in 1864 and was the first dictionary of its kind.

Justi’s pioneering work was superseded in 1904 with the appearance of Bartholomae’s Altiranisches Wörterbuch – an immense contribution to the study and understanding of Avestan and Old Persian. Based entirely upon Bartholomae’s readings and definitions, Wolff\(^{45}\) then published a German translation of the Avestan texts edited by Geldner (see below section 1.6) in 1910 entitled: ‘Avesta. Die heiligen Bücher der Parsen’. In 1927, Lommel\(^{46}\) brought out his important monograph ‘Die Yašts des Avesta’, being a translation of all 21 Yašts into German, along with an introduction to each hymn. Lommel is to be credited with many innovative suggestions and improved upon Wolff’s translation both in terms of style and accuracy. His translation of the Rašn Yašt effectively stood as the

1 Introduction

last serious, scientific attempt for nearly a century\(^{47}\), during which time significant advances were made in the fields of Zoroastrian studies and Indo-Iranian (and Indo-European) philology.

Then, in 2009, Pirart\(^{48}\) published as an article a French translation of Yt.12, which includes also the text (without an *apparatus criticus*), an introduction and a brief set of commentarial notes. The following year, a slightly modified version of this translation (without text) was published in book form as part of the scholar’s collection of Yašt translations\(^{49}\).

1.6 Editions (without translation) of the Rašn Yašt

The earliest text-critical version of the Rašn Yašt was published in 1854 by Westergaard\(^{50}\) as part of his seminal work entitled *Zendavesta*. This book presented for the first time a text of the Avesta (in Avestan script), together with an *apparatus criticus*. In the case of Yt.12, this included readings from five manuscripts\(^{51}\), namely: Or (= O3 in present edition), P13 L18 K12 W2 as well as an edition of the text produced in Bombay (written in Gujarati script) in 1842 and given the siglum Kh1. As the first, Westergaard’s edition was to prove invaluable to scholars of the day.

Between 1889-1896, Geldner\(^{52}\) brought forth his three-volume critical-edition of the Avesta, and his work – drawing on some 150 mss., quickly superseded Westergaard’s as the standard text. For the Rašn Yašt, Geldner collated altogether 10 codices, including the oldest, F1. His text (also presented in the Avestan script) was based upon the following manuscripts: F1 E1 Pt1 P13 O3 L18 K12 J10 W2 M12. Until the present, Geldner’s critical-edition of the Yt.12 text has remained without revision.

1.7 Prolegomena

1.7.1 Manuscripts containing the Rašn Yašt

The Rašn Yašt is known from at least fifteen manuscripts. Geldner\(^{53}\) divided the Yašt containing manuscripts into three principal types:

---

\(^{47}\) Here, reference may be made to the translations of the Yašts published by T. R. Sethna in 1976 which though, is an admitted work of an amateur. See Sethna, *Yashts*, ii and for the Rašn Yašt, pp.182-197.

\(^{48}\) Pirart, 2009.

\(^{50}\) Westergaard, *Zendavesta*.

\(^{51}\) Note that the Yašt-containing manuscripts are, in the present work, principally referred to by the sigla employed by Geldner in his edition of the Avesta. By contrast, manuscripts of the Yasnā/Visperād/Visēvdād/Vīstāsp/Yašt are principally referred to by the numerical identifiers established by Cantera and employed on the Avestan Digital Archive website (http://ada.usal.es). See Cantera, *LL*, 403ff (Annexe 5) for a full list. All manuscripts quoted herein are cited in the Bibliography and the bibliographic references include any alternative identifiers.

\(^{52}\) Geldner, *Avesta*.

1) Indian Yašt Sāde codices, containing the complete set of 21 Yašts and Nyāyiṣns, as exemplified by F1.
2) Khordе Avestа with some Yašts codices, containing only a selection of the Yašts, as exemplified by O3.
3) Khordе Avestа with all Yašts codices, as exemplified by E1.

In addition, the Yašts have been transmitted in smaller Yašt Sāde type manuscripts such as W2 that contain only a limited selection of Yašts but not Khordе Avestа texts.

Readings from the following manuscripts have been included in the present edition:

**F1.** Yašt Sāde codex\(^\text{54}\). 277 foll., 19 x 12 cms. Written in Navsari by Āsadīn Kākā of the family of Hormazyār Rāmyār. Completed 1591 CE. This is the earliest Yašt codex. The manuscript belongs to the private collection of the JamaspAsа family. A facsimile edition was published by JamaspAsа\(^\text{55}\). Yt.12, foll. 170r – 175v.

**P1.** Khordе Avestа with all Yašts codex\(^\text{58}\). 543 foll., 21 x 13 cms. Written in Surat by Herbab Dārāb, descendant of Hormazdyār Rāmyār, in 1625 CE\(^\text{59}\). The present whereabouts of this manuscript are not known\(^\text{60}\).

**P13.** Khordе Avestа with some Yašts codex\(^\text{63}\). 427 foll., 20 x 13 cms. Bound. Scribe and date unknown though, according to Blochet (writing in 1898), it belongs to the (then) last century. Housed at the Bibliothèque Nationale de France. Catalogue ref.: no.4, new supplement 31. Yt.12, foll. 351r - 357r.

Introduction

1.18. Khorde Avesta with some Yašt codex\textsuperscript{64}. 490 fol. 25 x 17 cms. Bound. The manuscript has no colophon, but the Sanskrit and Pāzand Āśīrvāds (foll. 111 v and 118 v) indicate the date 1672 CE. Housed at the British Library. Catalogue ref: Oriental mss. Avestan 20. Yt.12, foll. 372r - 380r.

K12. Khorde Avesta with all Yašt codex. 378 foll. Written in 1801 CE. Manuscript located at the Kongelige Bibliotek, Copenhagen\textsuperscript{65}.

J10. Khorde Avesta with all Yašt codex\textsuperscript{67}. 540 foll. 20 x 14 cms. Undated but ‘modern’. This manuscript belongs to the private collection of the Jamasp Asa family, Bombay, though its present whereabouts are unknown.

W2. Smaller Yašt codex\textsuperscript{68}. 394 foll. 18 x 11 cms. Bound. Unknown date (first half of 19\textsuperscript{th} cent.), made for Rev. Dr. John Wilson, by same copyist as K40\textsuperscript{69}. Housed at the John Rylands Library, Manchester (UK). Catalogue ref: Rylands Parsi ms. No.13 (old no.4 ‘collection of favourite Yashts’). Yt.12, foll. 150v – 249v.

J19. Khorde Avesta with all Yašt codex. 439 foll. 14 x 20.5 cms. Unknown date. This manuscript belongs to the private collection of Daṣtar Jamasp Asa. Yt.12, pp. 494 – 518.

In his edition, Geldner provided occasional readings from M12, a modern manuscript\textsuperscript{70} written in Persian script compiled from Indian and Iranian sources. A very few readings have been carried over to the critical apparatus of the present work. There exist at least two additional manuscripts containing the Rašn Yašt which were not utilised by Geldner nor for the present edition:

EMU2. Khorde Avesta with some Yašt codex\textsuperscript{71}. 158 foll. (foll. 1-10 missing, incomplete at end also). 20.5 x 17.5 cms. Unknown date. Formerly belonging to Ervad Maneckji R. Unwala. Yt.12, foll. 146-151. Present whereabouts unknown.

B27. Khorde Avesta with some Yašt codex\textsuperscript{72}. 2 bound vols.: Vol.1 foll.1-318. Vol. 2 foll.320-558. 24.5 x 14 cms. Written by Ervad Tehmur Ervad Kaus Sanjana in 1796 CE. Housed in Dastur Kayoji Mirza Institute, Udvada.

In the current apparatus, Geldner’s text is denoted by the siglum G.

Of those manuscripts employed by Geldner for his edition (see p.9), F1 E1 O3 P13 L18 and W2 have here been freshly collated yielding many additions and a few corrections73. Three additional manuscripts, P3 J18 J19, which are unknown to Geldner’s edition of the Yaštś, have also been collated for the present edition. For Pt1 K12 J10 and M12, I have had to rely entirely upon Geldner’s apparatus.

1.7.2 FILIATIONS

All the manuscripts collated for the present edition derive from India, the Raśn Yaštś being unattested in any of the known, Iranian Khorda Avesta codices. For those Yaštś, including Yt.12, attested in the Indian Khorda Avesta tradition proper74, Geldner75 supposed there to be two branches of transmission: 1) The Indian Yašt Sāde manuscripts, represented principally by the manuscript F1, but including a side-line represented by J10; 2) The Indian Vulgate.

Within a single manuscript however, it was not uncommon for the Yaštś to have been copied from a variety of sources and to evidence a highly complex series of horizontal relations. Illustrative here are Geldner’s remarks on the Khorda Avesta with all Yašt codex Pt1, the scribe of which he supposed ‘…at first took as the basis of his copy one or more Khorda Avestâ Mss., but completed the Yaštś by drawing also upon F1’76. In particular, Geldner believed F1 served as the source for Yaštś 5-8; 10-13; 15; 17-1977.

The task of determining genealogical relations between the manuscripts thus becomes extremely complicated78 and it is fair to say that the written transmission of the Yaštś as a whole is only very imperfectly understood. For this reason, I have refrained from attempting to draw a stemma codicum79 as well as speculating on the pre-recorded history of the Yaštś’ transmission. Instead, I have grouped together under the appropriate representatives of F1 and J10, such manuscripts as appear most closely related. These observations are drawn from, and are limited in scope to, the twelfth Yašt80.

73 For example, in his apparatus to Yt.12,6, Geldner erroneously stated that lines a-g (inclusive) were missing in J10 M12 and W2, where in fact they stand in W2. Further, he claimed that at the conclusion of Yt.12,6, stanzas 5-6 are repeated in O3 J10 K12 W2 M12, where such text is not repeated in W2.
74 Typically exclusive of the ‘greater’ Yaštś 5,8,10,15,17,19.
75 Geldner, Prolegomena, xlv.
76 Geldner, Prolegomena, xlii.
77 Cf. Tremblay, 1996:111 fn.22, who further argued for the influence of the Indian vulgate tradition on Pt1, coming either directly, or (in his opinion) more probably via a second-hand correction to F1.
79 For stemmata relating to the Yaštś, cf. those drawn by Hintze, ZY, 58, Panaino, Tīrțya, I, 9 (which largely agrees with Hintze), and the revisions proposed by Tremblay, 1996:112.
80 Omitted from detailed discussion are the mss. Pt1 K12 M12 which have not been freshly collated for the present edition. On these, cf. Geldner, Prolegomena, xl ff.
